Assignment #4: Read Me

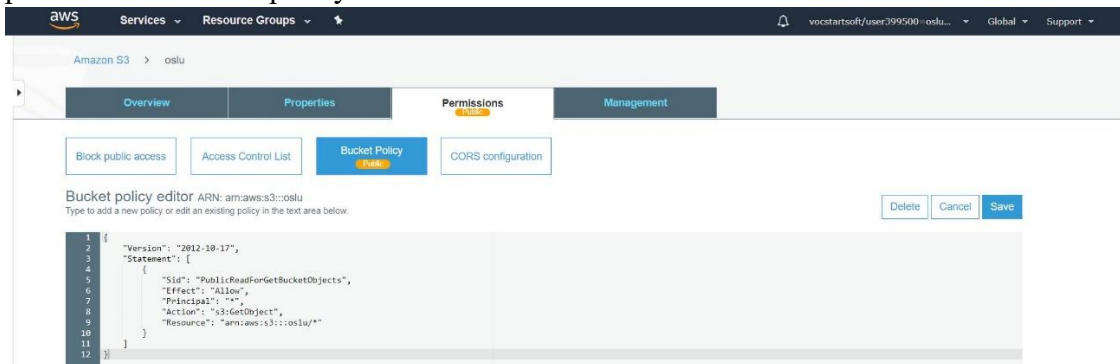

1. I created a bucket named oslu and uploaded two different folders, documents and photos. Three files in documents, and four images in photos.

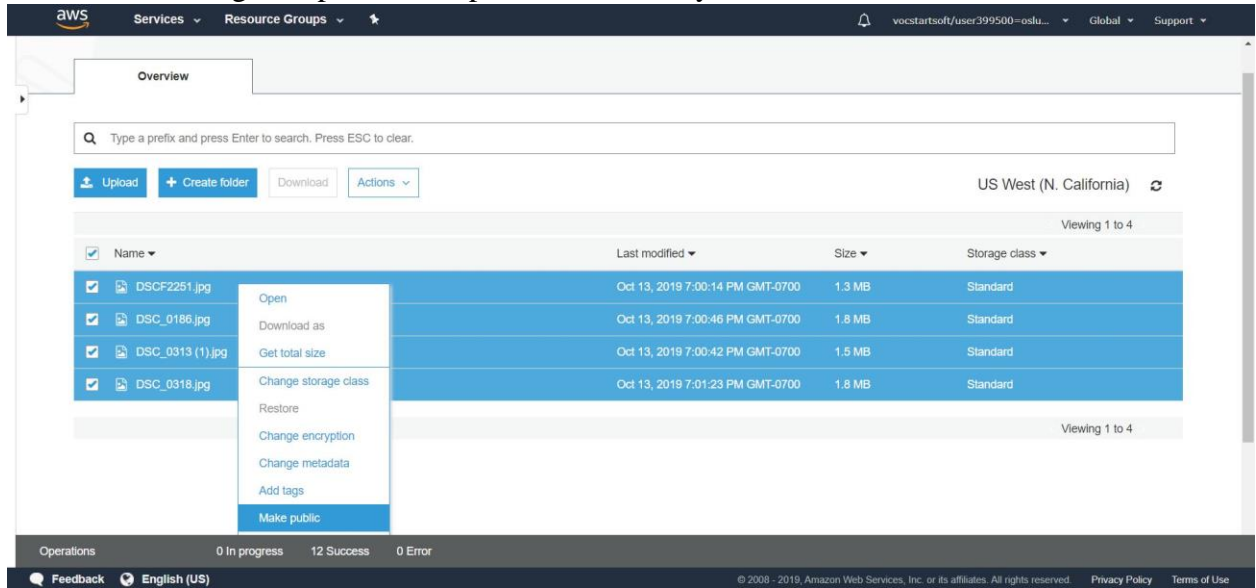

2. I also needed to understand basic file operations, such as store, retrieve, and delete.

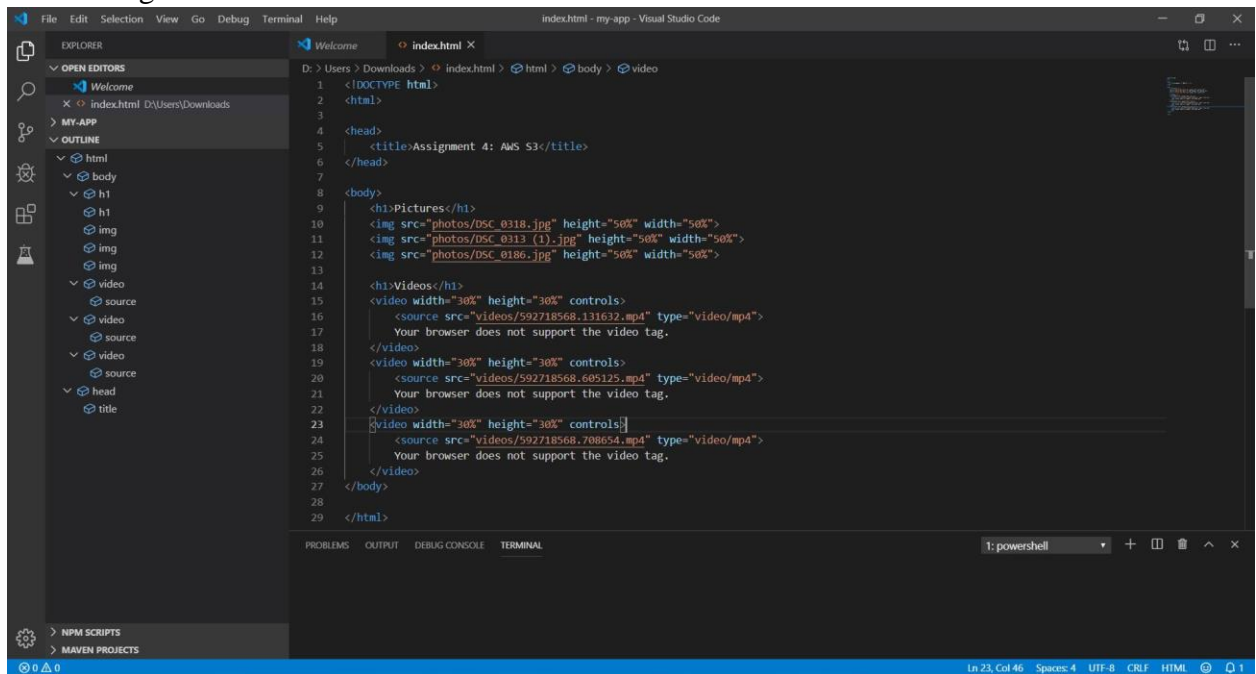

3. Understanding that the bucket was created privately, I changed that in properties and permission's bucket policy.

4. I also had to change the photos into public individually.

5. To create a website, I need to upload an index.html that would be able to call the photos from storage. I coded it on Visual Studio Code.

6. My web page is listed on the link: <http://oslus3-website-us-west-1.amazonaws.com/>
